

The Rock Cycle

Across

- 2. Process that compresses sediment by the weight of the rock layers above them
- 4. rocks are formed by compaction and cementation
- 7. molten material outside of volcano
- 11. example of metamorphic rock
- 12. example of igneous rock
- 13. where igneous rocks form at
- 14. When a rock cools slowly and forms crystals
- 15. The process of moving sediments from one place to another

Down

- 1. Process that makes sediments stick together
- 3. the process of breaking down similar rocks
- 5. sediments are lay down in layers
- 6. example of sedimentary rock
- 8. Rock made by heat and pressure
- 9. lives inside a volcano
- 10. The process of which one rock changes one after another; igneous, metamorphic and sedimentary
